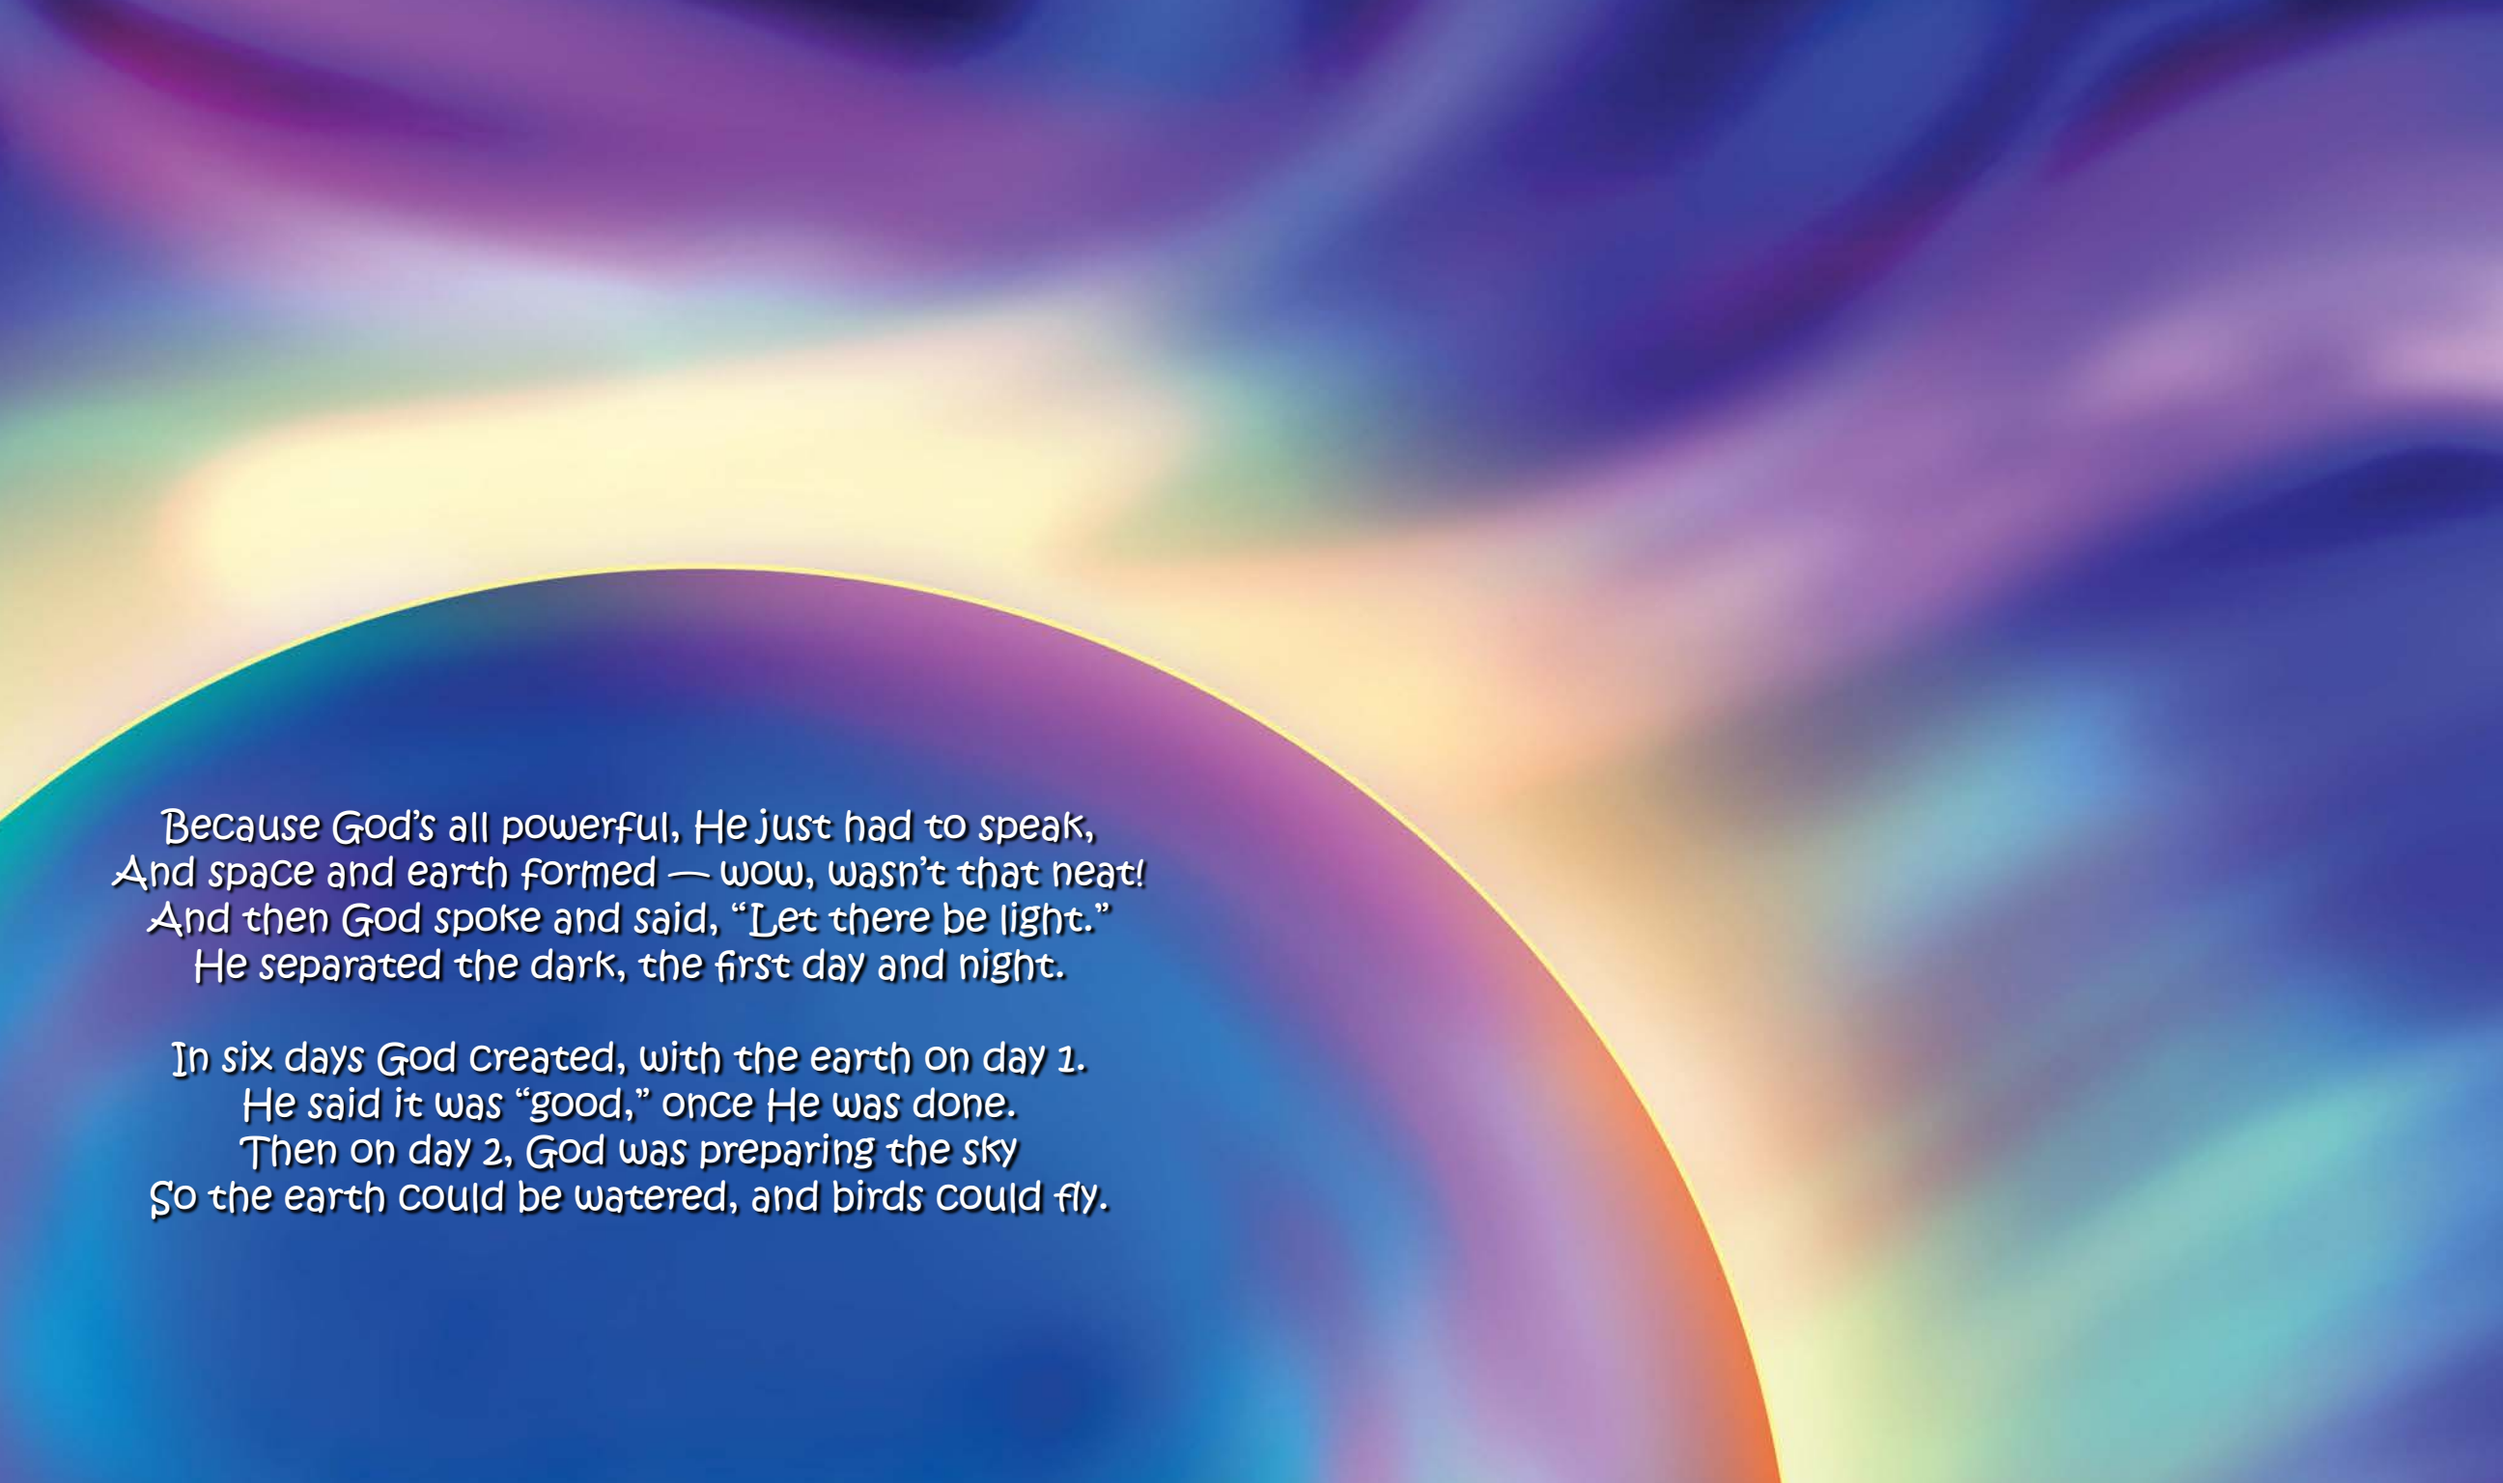
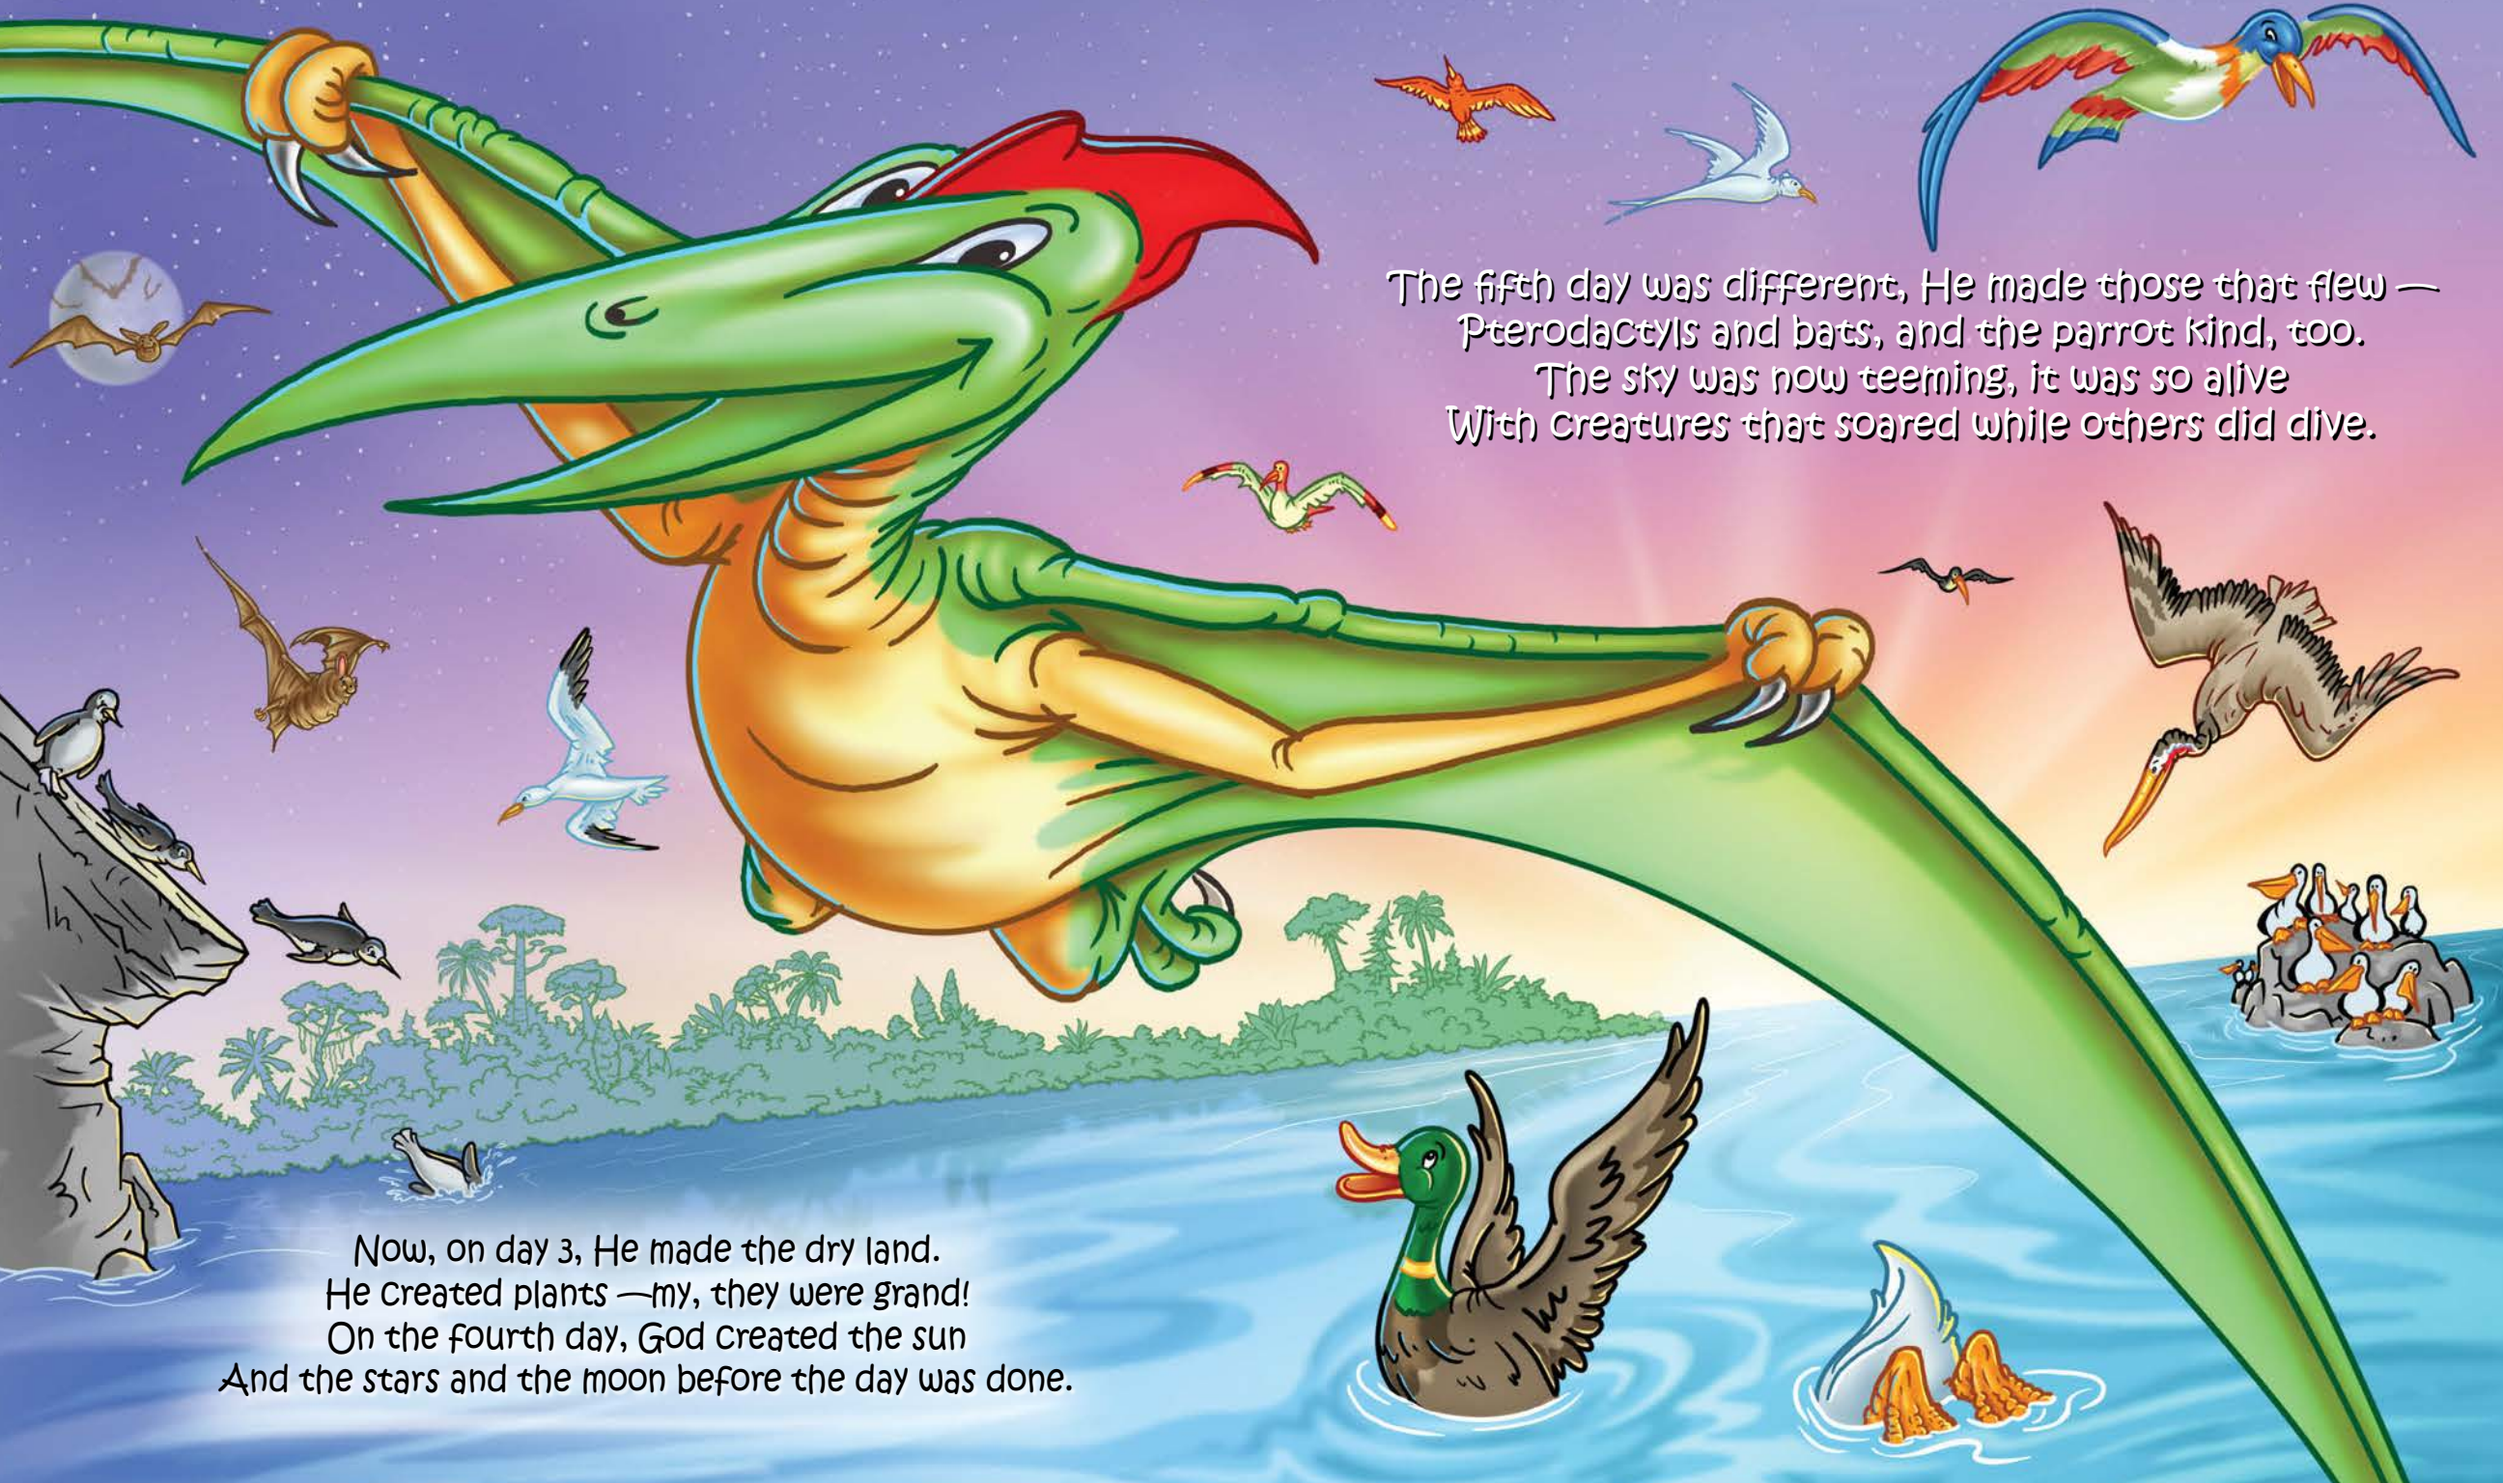
The Bible is a very special book,
And in its pages if you'll look,
God will tell you how the universe began
From the earth and sun to the very first man.
God is INFINITE, but what does that mean?
No one is bigger and He's always been.
The Bible begins with a simple fact —
God's always existed, and that is that!
Holy Bible

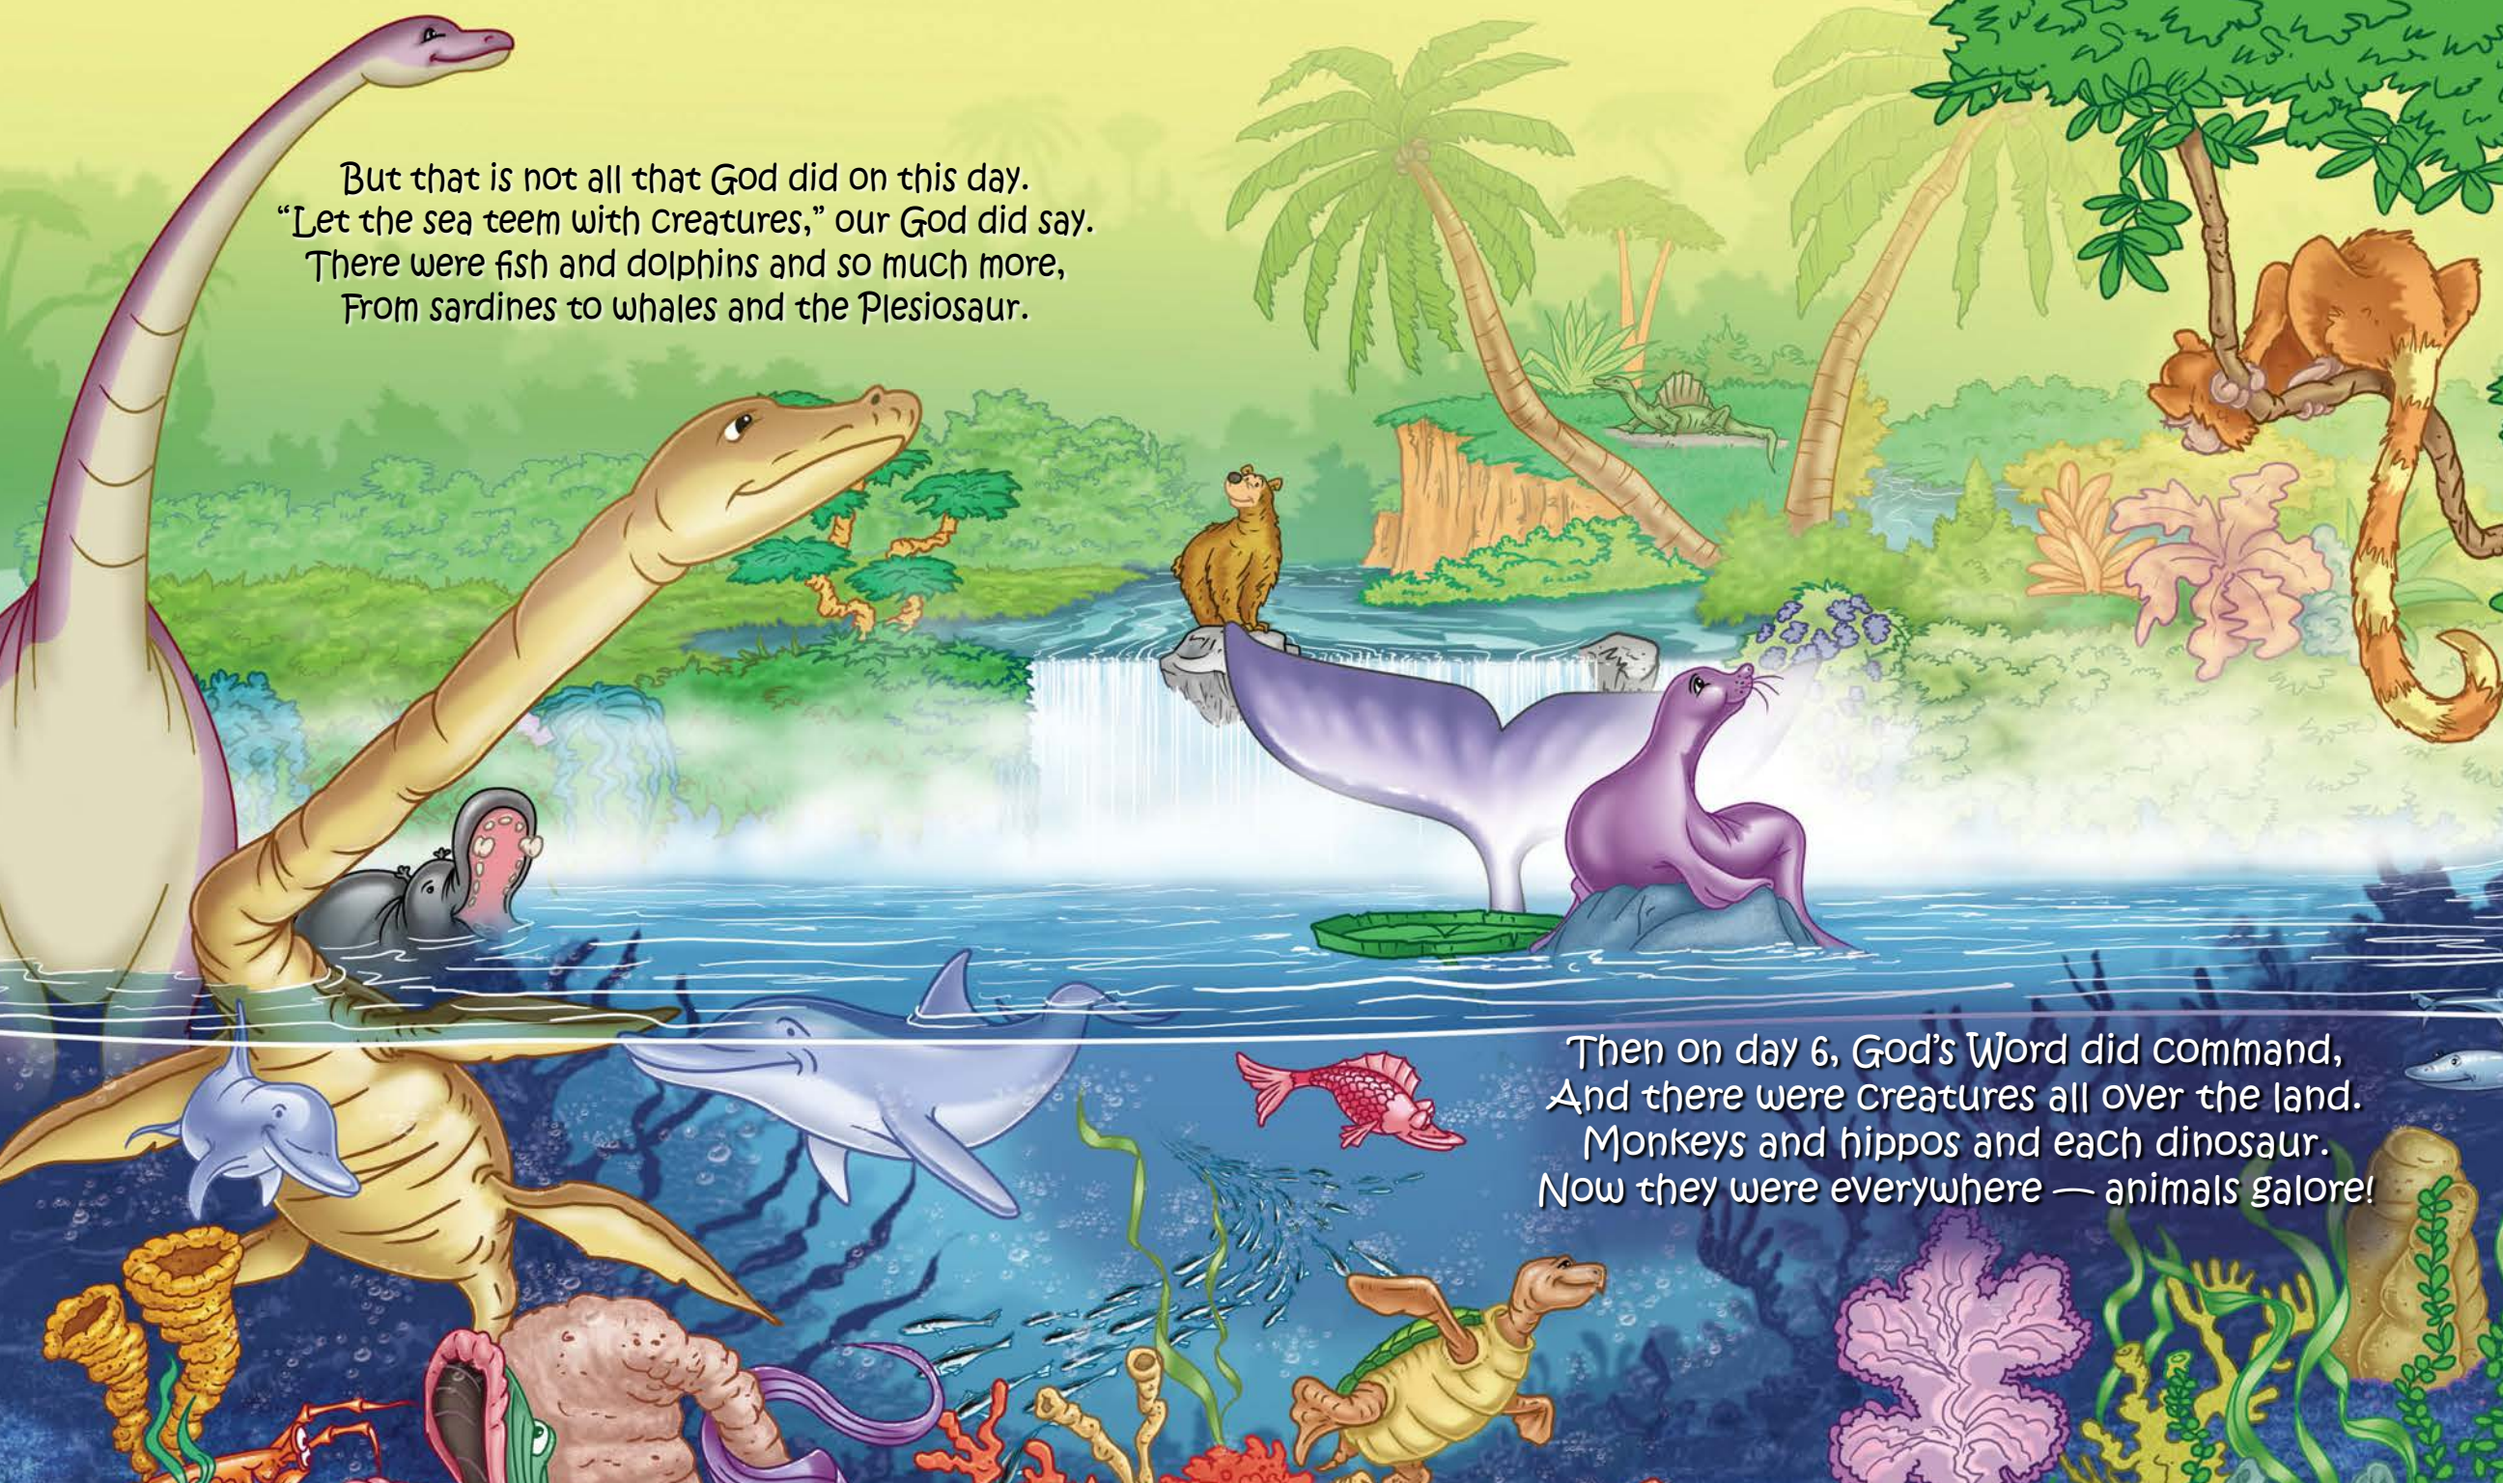


Because God's all powerful, He just had to speak,
And space and earth formed — wow, wasn't that neat!
And then God spoke and said, "Let there be light."
He separated the dark, the first day and night.
In six days God created, with the earth on day 1.
He said it was "good," once He was done.
Then on day 2, God was preparing the sky
So the earth could be watered, and birds could fly.

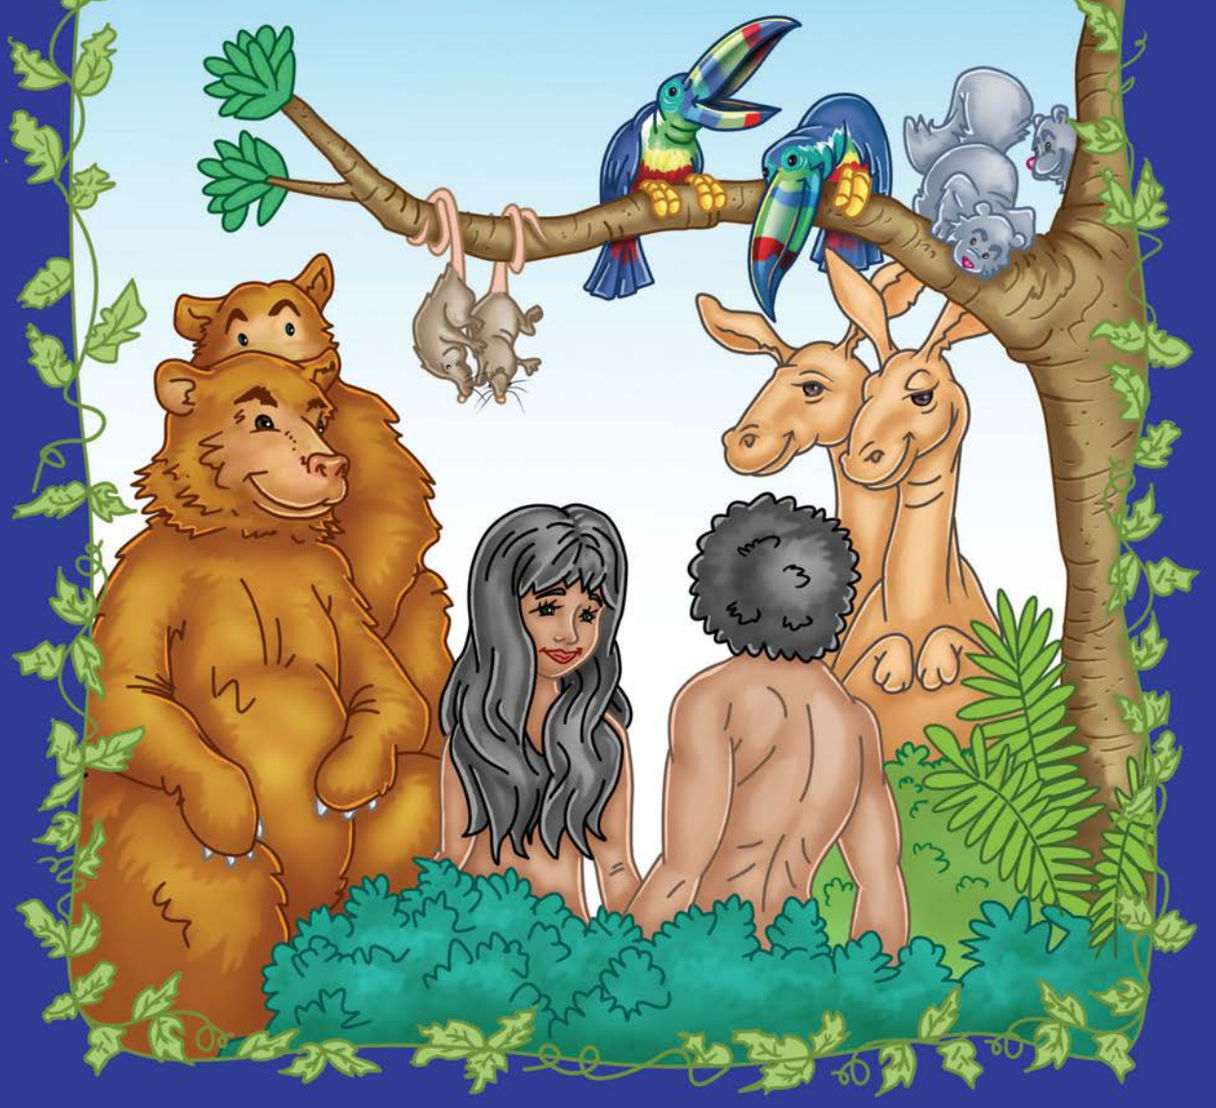


The fifth day was different, He made those that flew —
Pterodactyls and bats, and the parrot kind, too.
The sky was now teeming, it was so alive
With creatures that soared while others did dive.

Now, on day 3, He made the dry land.
He created plants —my, they were grand!
On the fourth day, God created the sun
And the stars and the moon before the day was done.



But that is not all that God did on this day.
"Let the sea teem with creatures," our God did say.
There were fish and dolphins and so much more,
From sardines to whales and the Plesiosaur.
Then on day 6, God's Word did command,
And there were creatures all over the land.
Monkeys and hippos and each dinosaur.
Now they were everywhere — animals galore!

God didn't stop there, He had a plan.
He used some dust to make the first man.
He was made in God's image, he was one of a kind.
There were none that were like him, none he could find.


With monkeys and apes, Adam still was alone,
So God put him to sleep and took a rib bone.
He made the first woman, Adam's wife was she.
A man and a woman, that's what marriage should be.
