Author Bio:

John Hudson Tiner (*Exploring the World of Mathematics, Exploring the World of Physics*) received five National Science Foundation teaching fellowships during his 12 years as a teacher of mathematics and science that allowed him to study graduate chemistry, astronomy, and mathematics. He also worked as a mathematician and cartographer for the Defense Mapping Agency, Aerospace Center in St. Louis, Missouri.

Tiner has received numerous honors for his writing, including the Missouri Writer's Guild award for best juvenile book for *Exploring the World of Chemistry*. He and his wife, Jeanene, live in Missouri.

Using This Teacher Guide

Features: The suggested weekly schedule enclosed has easy-to-manage lessons that guide the reading, worksheets, and all assessments. The pages of this guide are perforated and three-hole punched so materials are easy to tear out, hand out, grade, and store. Teachers are encouraged to adjust the schedule and materials needed in order to best work within their unique educational program.

Lesson Scheduling: Students are instructed to read the pages in their book and then complete the corresponding section provided by the teacher. Assessments that may include worksheets, activities, quizzes, and tests are given at regular intervals with space to record each grade. Space is provided on the weekly schedule for assignment dates, and flexibility in scheduling is encouraged. Teachers may adapt the scheduled days per each unique student situation. As the student completes each assignment, this can be marked with an “X” in the box.

Approximately 30 to 45 minutes per lesson, three to four days a week

Includes answer keys for worksheets, quizzes, and tests.

Worksheets for each section

Quizzes and tests are included to help reinforce learning and provide assessment opportunities.

Designed for grades 9 to 12 in a one-year course to earn 1 science credit

Course Objectives: Students completing this course will

- ✓ Discover how biological classification gives each different type of plant or animal a unique name
- ✓ Learn about the differing ways that seeds spread around the world
- ✓ Assess what food the body uses for long-term storage of energy
- ✓ Explain how biologists learned about the stomach and digestion
- ✓ Identify the important invention that caused the world to be divided into time zones
- ✓ Evaluate the simple math problem that caused the Mars Climate Orbiter to burn up in the Martian atmosphere
- ✓ Determine the common unit of measurement originally based on the distance from the equator to the North Pole
- ✓ Compare what Da Vinci's Last Supper and the Parthenon have in common
- ✓ Learn about the history of physics from Aristotle to Galileo to Isaac Newton
- ✓ Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space
- ✓ Find out why pure gold is not used for jewelry or coins
- ✓ Identify Humphry Davy's chemical discoveries and learn how they shortened his life

Course Description

Students will study four areas: mathematics, physics, biology, and chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in *Exploring the World of Mathematics*. And in *Exploring the World of Physics*, students find a great tool to have a deeper understanding of the important and interesting ways that physics affects our lives. *Exploring the World of Biology* is a fascinating look at life — from the smallest proteins and spores, to the complex life systems of humans and animals. *Exploring the World of Chemistry* brings science to life and is a wonderful learning tool with many illustrations and biographical information.

Grading Options for This Course

It is always the prerogative of an educator to assess student grades however he or she might deem best. The following is only a suggested guideline based on the material presented through this course:

To calculate the percentage of the worksheets, quizzes, and tests, the educator may use the following guide. Divide total number of questions correct (example: 43) by the total number of questions possible (example: 46) to calculate the percentage out of 100 possible. $43/46 = 93$ percent correct.

The suggested grade values are noted as follows: 90 to 100 percent = A; 80 to 89 percent = B; 70 to 79 percent = C; 60 to 69 percent = D; and 0 to 59 percent = F.

select the letter for the phrase that best completes the sentence.*

- T F** 1. The extra day, or leap day, every four years was put in the calendar to honor Augustus Caesar.
- T F** 2. The Gregorian calendar has 100 leap days every 400 years.
3. What is the main reason to have leap days?
- A B C D** 4. The first calendar with a leap day every four years was the one
- A. authorized by Julius Caesar
 - B. used by the American colonies after 1752
 - C. used by the Babylonians
 - D. used by the Egyptians

Matching

- 5. _____ day
 - 6. _____ week
 - 7. _____ month
 - 8. _____ season
 - 9. _____ year
- a. due to the tilt of the earth's axis, equal to three months
 - b. earth revolves around the sun once
 - c. earth rotates on its axis once
 - d. moon revolves around the earth once
 - e. seven days

Try Your Math

10. The Bible says that Methuselah died at age 969 years (Gen. 5:27). What would be that age in days? (Ignore leap years.)
11. Using the Babylonian calendar of 360 days in a year, how many days are in one-third of a year; one-fifth of a year; one-twentieth of a year; one-sixtieth of a year?
12. Find the population of your city and calculate how many people are likely to have a birthday on February 29.

*Answer T or F for true or false, or select the letter
for the phrase that best completes the sentence.*

- A B C D** 1. The shortest naturally occurring period of time that ancient people could observe was the (A. day, B. hour, C. week, D. year).
- T F** 2. The Egyptians divided daylight into 8 or 12 hours depending on whether it was winter or summer.
- A B C D** 3. The inventors of the hourglass were the (A. Babylonians, B. British Navy, C. Egyptians, D. Romans).
- A B** 4. A watch with a sweep second hand is known as (A. an analog, B. a digital) watch.
- T F** 5. Meridians are imaginary lines going around the earth parallel to the equator.
- A B C D** 6. Military time has hours numbered from 0000 to (A. 0400, B. 1200, C. 2400, D. 3600).
- A B C D** 7. Time zones were introduced when it became common to travel by (A. airplanes, B. ox carts, C. ships, D. trains).
- A B** 8. The International date line is in the (A. Atlantic, B. Pacific) ocean.
- A B** 9. Atomic clocks proved that the earth's rotation (A. is, B. is not) uniform.
- A B C** 10. The United States became an independent nation in 1776. In 1976, the country celebrated the fact that the United States was two (A. decades, B. centuries, C. millenniums) old.

Try Your Math

11. Assume that the first four-hour watch began at midnight. What time would it be at five bells on the second watch?
12. Feel your pulse at the wrist and count the number of beats in a minute. Calculate the number of times your heart beats in a day.
13. An office job is often described as working from 9 to 5. This means 9:00 a.m. to 5:00 p.m. How many hours is this?
14. At 4:00 p.m., a family on vacation drives from Mountain Standard Time into Central Standard Time. Should their watches be set one hour earlier to 3:00 p.m. or one hour later to 5:00 p.m.?

Exploring the World of Physics

Answer T or F for true or false, fill in the blank, or select the letter for the phrase that best completes the sentence.

- A B C D** 1. Physics is the science that explores how energy acts on (A. heat, B. light, C. matter, D. sound).
- T F** 2. The ancient Greeks were noted for their careful experiments.
- T F** 3. The regular back and forth motion of a pendulum was used to regulate the first accurate clocks.
- T F** 4. In Galileo's time, only length and time could be measured with any accuracy.
- A B C D** 5. A feather and lump of lead will fall at the same speed in (A. a high speed wind tunnel, B. the atmosphere, C. a vacuum, D. water).
6. To calculate speed, divide distance by _____.
- A B C D** 7. To study the motion of falling objects, Galileo (A. beat them into cubes, B. dropped them from a high tower, C. pushed them from a cliff, D. rolled them down a ramp).
- A B C D** 8. Acceleration is found by dividing the (A. average velocity, B. distance, C. gravity, D. change in speed) by the change in time.
- A B** 9. On earth, the acceleration due to gravity is (A. 32 ft/sec^2 , B. 60 miles/hour).

10. Suppose a canoeist takes 70 days to paddle the entire length of the Mississippi River, a distance of 3,710 miles. The canoeist's average speed in miles per day is _____.
11. An ordinary passenger car can accelerate to 60 miles per hour in about eight seconds. What is the car's acceleration?
12. On the moon, the acceleration due to gravity is 5.3 ft/sec^2 rather than 32 ft/sec^2 . If an object fell six seconds before hitting the ground, it strikes the ground with a speed of _____ ft/sec. (Hint: Use the final velocity equation.)

Answer T or F for true or false, fill in the blank, or select the letter for the phrase that best completes the sentence.

- T F** 1. Velocity and speed mean the same.
- T F** 2. A force must act on an object to put the object in motion, give it greater speed, slow it, or change its direction.
- T F** 3. All objects come to a stop unless some force keeps them going.
- T F** 4. A ball rolling on a flat surface comes to a stop because of the force of (A. friction, B. gravity).
- A B C** 5. Isaac Newton's first law of motion was based on experiments done by (A. Aristotle, B. Galileo, C. Newton, himself).
- A B C D** 6. Inertia is a property of matter that resists changing its (A. electric charge, B. mass, C. momentum, D. velocity).
- T F** 7. Only very massive objects have inertia.
- T F** 8. Acceleration is any change of speed or direction.
9. State the second law of motion.
10. State the third law of motion.
11. Momentum is the mass of an object times its _____.
- T F** 12. The law of conservation of momentum is one of the most firmly established laws of science.

11. 6:30 a.m. The second watch began at 4:00 a.m. Each bell is $\frac{1}{2}$ hour. Five bells are $2\frac{1}{2}$ hours: $4:00 \text{ a.m.} + 2 \text{ hr. } 30 \text{ min.} = 6:30 \text{ a.m.}$
12. Answer varies depending on actual heart rate. For 72 beats per min: $72 \text{ beats per min.} \times 60 \text{ min. per hr.} \times 24 \text{ hr. per day} = 103,680 \text{ beats per day}$
13. 8 hours. One way to solve the problem is to change to military time and subtract — 9:00 a.m. is 0900 and 5:00 p.m. is 1700: $1700 - 0900 = 0800$ or 8 hours.
14. one hour later, 4:00 p.m. MST is 5:00 p.m. CST
